

## KMMAG-21S

Isolated adhesive mounting  
base for accelerometers

- Electrically isolated
- Pull force – 5kg nom.
- -70°C to +200°C range
- 10/32UNF integrated stud
- 21mm Across flats
- 9.9mm height
- Low mass – 22gm

The KMMAG-21S is an isolated magnetic mounting base for use with accelerometers and other sensors requiring surface mounting. It features a nickel-plated mild steel body and a PTFE isolating washer. This solution solves issues of earth loops causing interference in data signals from sensors.

The integral mounting stud limits the use of the KMMAG-21S to sensors with a 10/32UNF tapped mounting hole. For greater flexibility for other mounting requirements use the KMMAG-21 also available from Kemo Ltd.

**Note:**

When using magnetic mounts with dynamic devices such as accelerometers, careful consideration should be applied to the type of surface finish on the test item, it is critical a smooth surface is present to avoid chattering of the magnet which will cause noise and data errors.

**Materials List:**

**Body:** Mild steel nickel plated

**Insulator:** PTFE

**Magnet:** Nickel plated Neodymium Iron Boron

**Pull Force:** 5kg nom.

**Mounting Torque:** 1.2Nm

Due to continued product development Kemo Limited reserve the right to change specification without notice.
